

EVALUATION

REFLECTING ON THE INVESTIGATION!

Scientists conclude an investigation by reflecting on their process. Consider these questions to evaluate the investigation.

- What surprised me?
- What are the sources of possible error?
- What alternative explanations might be responsible for my results?
- How confident am I in my results?
- What would I do differently?
- What would my prediction be if I conducted this investigation again?
- What question would I like to investigate next?
